

Pufferfish [Share article feedback](#)

v t This article is about the mob. For the food item, see Pufferfish (item). For other uses, see Fish (disambiguation).

Pufferfish are bucketable aquatic neutral mobs found in oceans. Although they never seek out mobs to attack, they defensively inflate themselves when approached too closely by players, axolotls, or non-aquatic mobs, dealing damage and inflicting Poison on them.

Spawning

In *Java Edition*, pufferfish spawn in groups of 1-3 in warm, lukewarm, and deep lukewarm ocean biomes, subject to fish spawning requirements. If trying to spawn inside a waterlogged solid block, the pufferfish uses the bigger "puffed" size to determine if it collides with anything solid.

In *Bedrock Edition*, pufferfish spawn underwater at around 12–32 blocks away from the player in groups of 3–5 in warm ocean biomes, and only on the surface; that is, there must not be a spawnable block above the spawn location with a non-solid block on top. They are considerably rarer than tropical fish, with only ¹⁄₅ of fish groups or ²⁄₉ individual fish (within the warm ocean biome) spawning as pufferfish.

Behavior

Unlike other fish, pufferfish don't swim in schools.

Pufferfish inflate themselves when approached by the player, most mobs, including tripod cameras^[*BE* & *edu* only] and armor stands.^{[1][2]}

The player may collect a fish by using a water bucket on it, giving the player a bucket of pufferfish. Fish placed with buckets do not despawn naturally. Using the bucket against a block empties the bucket, placing water with that fish swimming in it. An empty bucket may be used as well.^[*Bedrock Edition* only]

Pufferfish can not be bred and only spawn in designated biomes.

Weaknesses

Like other fish, pufferfish cannot survive out of water. Outside of water, they flop around like guardians for a while until they start suffocating and then die like squid. In *Bedrock Edition*, they rotate when flopping. Fish cannot swim or breathe in cauldron water.^[3]

The Impaling enchantment affects pufferfish due to being aquatic^[*Java Edition* only] or simply being in water^[*Bedrock Edition* only].

Pufferfish are actively hunted down by axolotls, nautiluses and zombie nautiluses.

Defenses

A pufferfish inflates when approached by a player in Survival or Adventure mode, a drowned, an axolotl, or any non-water mob within 2 blocks of its hitbox, going from unpuffed, then semi-puffed, to fully puffed. Going

near a semi-puffed or fully puffed pufferfish inflicts the player/mob with three or six seconds of  Poison based on the inflation level, and touching one in its puffed or semi-puffed form deals damage separate from the Poison.

Pufferfish also instantly inflate to their fullest form after taking any kind of damage.^[*Bedrock Edition* only] After inflating, they slowly deflate to their normal shape as long as a threat is out of range. If the player/mob leaves the radius while the pufferfish is in its semi-puffed stage, it deflates back to normal.

Undead mobs are unaffected by the Poison effect, but they still take damage when they come into contact with pufferfish.

A pufferfish that inflicts damage on a mob other than a creeper or a ghast by touching it provokes that mob to retaliate.

In Peaceful difficulty, pufferfish do not inflict damage or Poison to player.^[Java Edition only]

Pufferfish can deal damage to players at a longer distance compared to mobs.^[4]

Tags common to all mobs

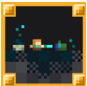

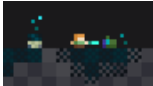

- FromBucket:** 1 or 0 (true/false) - if true, the fish has been released from a bucket.
- PuffState:** A value from 0–2.
 - 0 means the fish is deflated
 - 1 means it is halfway puffed-up
 - 2 means it is fully puffed-up

A pufferfish's damage and Poison time are directly related to its current PuffState data value, which can be changed using the /data command.

Development

<u>June 28, 2010</u>	Notch mentioned that fish might be a feature of <u>coral</u> , if he were able to add coral: "... I do know that the corals will have tiny fish particles around them."
<u>October 4, 2010</u>	Fish were a passive mob that Notch showed interest in adding. In the promotional graphic for the Halloween Update, Notch indicated he would add fish. However, they were added only as an <u>item</u> ; there was no code for a fish mob.
<u>October 5, 2012</u> (https://twitter.com/Dinnerbone/status/253954758489038848)	Fish were jokingly teased in the fake snapshot <u>12marc40awesome</u> , along with coral and "fish blocks".

He responded, "I would like to add birds, fish and tree animals to make it more alive. However this will take some time before it can be done."
<u>July 31, 2013</u> (https://reddit.com/r/Minecraft/comments/xfzdg/i_am_markus_persson_a_ka_notch_creator_of/)	During Notch's AMA on Reddit, when asked about what happened to his plans of adding fish as a <u>mob</u> , he responded, "Oh yeah, the fish!"

Trivia

- In real life, pufferfish use their spikes for intimidation purposes and not to inject venom. Their flesh is toxic, which is reflected accurately in-game.
- There are three textures for the three different PuffState data values in *Minecraft*. A PuffState value greater than 2 does not visually increase the pufferfish size, but does create a bigger shadow on the ground. All sizes of pufferfish textures are contained in the same texture file.
