

Silverfish re article feedback

This article is about the gray hostile mob. For the joke feature, see [Redstone Bug](#). For the mob in [Minecraft Dungeons](#), see [MCD:Silverfish](#).

Silverfish are small [hostile](#) [arthropods](#) found infesting [stone](#) and [deepslate blocks](#) in [mountain caves](#) and certain [structures](#), such as [strongholds](#), or spawned using [potions of Infestation](#). They attack by [biting](#), and attacking one can cause nearby silverfish to break out of their blocks to attack the aggressor.

Spawning

Silverfish spawn from broken [infested blocks](#), which generate in [strongholds](#), underground in [mountains](#) and [windswept hills](#) [biomes](#), in [igloo](#) basements, and in [woodland mansion](#) false portal rooms. Silverfish do not appear if the block is broken with the [Silk Touch](#) enchantment.^[1]

Monster spawners

Silverfish [monster spawners](#) naturally generate in [end portal](#) rooms in [strongholds](#). Silverfish can spawn from spawners at [light level](#) 11 or lower. In *[Java Edition](#)*, they can also spawn on stone types they can enter (stone, cobblestone, stone bricks, etc.) at any light level, and cannot spawn within a 5 block distance of any player^{[[verify](#)]}.

Trial spawners

Each [trial chambers](#) structure has a 25% chance to select silverfish as the "small melee" mob for its [trial spawners](#).

During [ominous trials](#), each [ominous trial spawner](#) has a $\frac{1}{7}$ chance to be able to dispense [lingering potions](#) of Infestation, which spawns silverfish when an affected entity takes damage. Any type of trial spawner can dispense Infested potions, regardless of the mob type it spawns.

Infested

Silverfish have a 10% chance to spawn in groups of 1-2 when an entity with the [Infested](#) effect takes damage.

Drops

On death

Silverfish have no drops other than 5 [experience](#) points when killed by a player or [tamed wolf](#).

Behavior

Silverfish attack players, and snow golems, and they call other silverfish in the area upon being hit. Silverfish pathfind toward the player and can see the player through walls.

When they suffer Poison damage or damage inflicted by the player and survive, they cause other silverfish within a 21×11×21 area to break out of their infested blocks. The player can prevent other silverfish from appearing by killing them in one hit.^[2] If the game rule `doTileDrops` is set to `false`, the infested blocks are broken, but no silverfish spawn from them.

Silverfish, being arthropods, take extra damage from the Bane of Arthropods enchantment, and receive Slowness IV upon being hit.

When idle, silverfish enter a nearby deepslate, stone, cobblestone, stone bricks, mossy stone bricks, cracked stone bricks, or chiseled stone bricks block, transforming it into the respective infested block if the game rule `mobGriefing` is set to `true`, as per default. They cannot infest mossy cobblestone,^[3] despite being capable of infesting both mossy blocks and cobblestone, and they also cannot infest slab and stairs of these blocks.^[4] They are also unable to infest andesite, diorite, granite or smooth stone.^[5]

Silverfish are immune to the infested status effect.

A silverfish being freed from an infested block, which calls for help from other silverfish; causing them to emerge from more infested blocks.

Trivia

- In real life, silverfish are harmless, small, and wingless insects that are often found in dark areas in buildings and the wooden pilings of seaside piers and trees. They are infamous for damaging paper-based products.
- Silverfish appeared in the April Fools 2.0 update as the redstone bug.
- Silverfish are the only real-life animals to be fully hostile mobs.
